## YEAR 9 - REPRESENTATIONS... <br> <br> algebraic Representation

 <br> <br> algebraic Representation}
## What do I need to be able

 to do?By the end of this unit you should be able to:

- Draw quadratic graphs
- Interpret quadratic graphs
- Interpret other graphs including reciprocals
- Represent inequalities

## Keywords

Quadratic: a curved graph with the highest power being 2. Square power Inequality: makes a non equal comparison between two numbers
Reciprocal: a reciprocal is 1 divided by the number
Cubic: a curved graph with the highest power being 3. Cubic power
Origin: the coordinate ( 0,0 )
Parabola: a 'u' shaped curve that has mirror symmetry

Quadaticic Grophs

If $x^{2}$ is the highest power in your equation then you have a quadratic graph

It will have a parabola shape

Subsitute the $x$ values into the equation of your line to find the $y$ coordinates

Intersection with the $y$ axis

| $\boldsymbol{x}$ | $\mathbf{- 4}$ | $\mathbf{- 3}$ | $\mathbf{- 2}$ | $\mathbf{- 1}$ | $\mathbf{0}$ | $\mathbf{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\boldsymbol{y}$ | 3 | 0 | -1 | 0 | 3 | 8 |

Coordinate pairs for ploting $(-3,0)$

Plot all of the coordinate pairs and join the points with a curve (freehand) Quadratic graphs are always symmetrical with the turning point in the middle

Interpret other graphs
Cubic Graphs

Reciprocal Graphs
$y=x^{3}+2 x^{2}-2 x+1$

Reciprocal graphs never touch
the $y$ axis.
This is because $x$ cannot be 0
This is an asymptote

Exponential Graphs

## Represent Inequalities

Mutiple methods of representing inequalities
$x<4$
all values are less than 4

The dotted line shows that the inequality does not
The shaded area indicates all possible values of $x$

The solid line shows that the inequality includes all the points on this line
$y \geq 2 x+1$

The shaded area indicates all possible solutions to this inequality
